

## IMA Commission on New Minerals, Nomenclature and Classification (CNMNC)

### Newsletter 59

Ritsuro Miyawaki (Chairman, CNMNC)<sup>1</sup>, Frédéric Hatert (Vice-Chairman, CNMNC)<sup>2</sup>,  
Marco Pasero (Vice-Chairman, CNMNC)<sup>3\*</sup> and Stuart J. Mills (Secretary, CNMNC)<sup>4</sup>

<sup>1</sup>Department of Geology and Paleontology, National Museum of Nature and Science, 4-1-1 Amakubo, Tsukuba 305-0005, Japan – [miyawaki@kahaku.go.jp](mailto:miyawaki@kahaku.go.jp); <sup>2</sup>Laboratoire de Minéralogie, Université de Liège, B-4000 Liège, Belgium – [fhatert@uliege.be](mailto:fhatert@uliege.be); <sup>3</sup>Dipartimento di Scienze della Terra, Università di Pisa, Via Santa Maria 53, I-56126 Pisa, Italy – [marco.pasero@unipi.it](mailto:marco.pasero@unipi.it); and <sup>4</sup>Geosciences, Museums Victoria, PO Box 666, Melbourne, Victoria 3001, Australia – [smills@museum.vic.gov.au](mailto:smills@museum.vic.gov.au)

The information given here is provided by the IMA Commission on New Minerals, Nomenclature and Classification for comparative purposes and as a service to mineralogists working on new species. Each mineral is described in the following format:

#### Mineral name, if the authors agree on its release prior to the full description appearing in press

Chemical formula  
Type locality  
Full authorship of proposal  
E-mail address of corresponding author  
Relationship to other minerals  
Crystal system, Space group; Structure determined, yes or no  
Unit-cell parameters  
Strongest lines in the powder X-ray diffraction pattern  
Type specimen repository and specimen number  
Citation details for the mineral prior to publication of full description

Citation details concern the fact that this information will be published in the *Mineralogical Magazine* on a routine basis, as well as being added month by month to the Commission's web site.

It is still a requirement for the authors to publish a full description of the new mineral.

NO OTHER INFORMATION WILL BE RELEASED BY THE COMMISSION

#### NEW MINERAL PROPOSALS APPROVED IN DECEMBER 2020

##### IMA No. 2018-135a

Xuite

Menan Volcanic Complex, near Rexburg, Madison Co., Idaho, USA (43°47'03"N, 111°58'23"W – holotype); paralava from Gillette, Campbell Co., Wyoming, USA (cotype)

Seungyeol Lee\* and Xiaofeng Guo

\*E-mail: [slee2@lpi.usra.edu](mailto:slee2@lpi.usra.edu)

Garnet supergroup

Cubic:  $Ia\bar{3}d$ ; structure determined

$a = 12.5056(5) \text{ \AA}$

5.106(16), 4.421(65), 3.342(24), 3.126(62), 2.796(100), 2.666(15), 2.552(63), 2.028(5)

Type material is deposited in the mineralogical collections of the Geology Museum of the Department of Geoscience, University of Wisconsin-Madison, 1215 West Dayton Street, Madison, WI

53706, USA, catalogue numbers UWGM 2341 (holotype – Rexburg), UWGM 2342, UWGM 2343, UWGM 2352 and UWGM 2353 (cotypes – Rexburg and Gillette)

#### REVISED CHEMICAL FORMULAE

A paper on the new mineral petrovite has been recently published (*Mineral. Mag.*, **84**, 2020, 691–698) in which the ideal chemical formula of the mineral is given as  $\text{Na}_{10}\text{CaCu}_2(\text{SO}_4)_8$ . With respect to the previously accepted formula  $\text{Na}_8(\text{NaCu})\text{Cu}_2\text{Na}(\text{SO}_4)_8$  (cf. CNMNC Newsletter 52), Ca has the status of species-forming constituent, and is partitioned at one of the six independent Na sites. After a careful consideration by the officers of the CNMNC, it turned out that  $\text{Na}_{10}\text{CaCu}_2(\text{SO}_4)_8$  can not be an end-member formula for the mineral. In fact it is an intermediate between the two compositions  $\text{Na}_{12}\text{Cu}_2(\text{SO}_4)_8$  and  $\text{Na}_8\text{Ca}_2\text{Cu}_2(\text{SO}_4)_8$ , which correspond to the two end-members (with  $x = 0$  and  $x = 1$ , respectively), of the general formula  $\text{CuNa}_{6-2x}\text{Ca}_x(\text{SO}_4)_8$ , where  $0 \leq x \leq 1$ . Examination of site occupancies indicates a structural formula  $\text{Na}_8(\text{Na}_{0.53}\text{Ca}_{0.47})_2(\text{Na}_{0.53}\text{Ca}_{0.47})_2\text{Cu}_2(\text{SO}_4)_8$ , which shows a  $\text{Na}^+ + \text{Na}^+ = \text{Ca}^{2+} + \square$  substitution mechanism. However, sodium is the dominant cation at all Na sites of the structure; therefore the ideal formula of petrovite should correspond to the formula of the predominant, Ca-free end-member constituent,  $\text{Na}_{12}\text{Cu}_2(\text{SO}_4)_8$ . The official IMA List of Minerals has been modified accordingly.

A paper on the new mineral chiyokoite has been recently published [*Can. Mineral.*, **58** (2020), 653–662] in which the ideal chemical formula of the mineral is given as  $\text{Ca}_3\text{Si}(\text{CO}_3)[\text{B}(\text{OH})_4]\text{O}(\text{OH})_5 \cdot 12\text{H}_2\text{O}$ . With respect to the previously accepted formula, arsenic is no longer an essential constituent. Actually the chemical and crystallographic data show that arsenic, in the form of the complex anion  $(\text{AsO}_3)^{3-}$ , is a subordinate constituent in the channels of the structure. These data were examined carefully by the CNMNC officers and were considered reliable. Accordingly it was agreed to modify the formula of chiyokoite in the official IMA List of Minerals.
