

## IMA Commission on New Minerals, Nomenclature and Classification (CNMNC)

### Newsletter 69

Ritsuro Miyawaki<sup>1</sup>(Chairman CNMNC), Frédéric Hatert<sup>2</sup>(Vice-Chairman CNMNC), Marco Pasero<sup>3\*</sup>  
(Vice-Chairman CNMNC) and Stuart J. Mills<sup>4</sup>(Secretary, CNMNC)

<sup>1</sup>Department of Geology, National Museum of Nature and Science, 4-1-1 Amakubo, Tsukuba 305-0005, Japan – [miyawaki@kahaku.go.jp](mailto:miyawaki@kahaku.go.jp); <sup>2</sup>Laboratoire de Minéralogie, Université de Liège, Bâtiment B18, Sart Tilman, 4000 Liège, Belgium – [fhatert@uliege.be](mailto:fhatert@uliege.be); <sup>3</sup>Dipartimento di Scienze della Terra, Università di Pisa, Via Santa Maria 53, 56126 Pisa, Italy – [marco.pasero@unipi.it](mailto:marco.pasero@unipi.it); and <sup>4</sup>Geosciences, Museums Victoria, PO Box 666, Melbourne, Victoria 3001, Australia – [smills@museum.vic.gov.au](mailto:smills@museum.vic.gov.au)

The information given here is provided by the IMA Commission on New Minerals, Nomenclature and Classification for comparative purposes and as a service to mineralogists working on new species.  
Each mineral is described in the following format:

#### Mineral name, if the authors agree on its release prior to the full description appearing in press

Chemical formula (ideal formula)

Mineral symbol

Type locality

Full authorship of proposal

E-mail address of corresponding author

Relationship to other minerals

Crystal system, Space group; Structure determined, yes or no

Unit-cell parameters

Strongest lines in the powder X-ray diffraction pattern

Type specimen repository and specimen number

Citation details for the mineral prior to publication of full description

**Citation details concern the fact that this information will be published in the *Mineralogical Magazine* on a routine basis, as well as being added month by month to the Commission's web site.**

**It is still a requirement for the authors to publish a full description of the new mineral.**

NO OTHER INFORMATION WILL BE RELEASED BY THE COMMISSION

#### NEW MINERAL PROPOSALS APPROVED IN AUGUST 2022

IMA No. 2022-023

Changesite-(Y)

$(\text{Ca}_8\text{Y})\square\text{Fe}^{2+}(\text{PO}_4)_7$

Cgs-Y

Northeastern Oceanus Procellarum, The Moon (retrieved from the Chang'E-5 mission)

Ting Li, Ziyang Li, Zhixin Huang, Jun Zhong, Guang Fan, Dongfa Guo, Mingkuan Qin, Jieli Zhang, Junjie Li, Hanbin Liu, Linfei Qiu, Fenggang Wang, Sheng He, Apeng Yu, Ruiping Liu, Yong Wu, Liumin Deng, Zongyao Tai, Yongzhi He and Yan Lin

\*E-mail: [liting\\_c@126.com](mailto:liting_c@126.com)

Cerite supergroup

Trigonal:  $R\bar{3}c$ ; structure determined

$a = 10.3957(4)$ ,  $c = 37.207(2)$  Å

8.104(17), 6.469(23), 5.198(32), 4.794(24), 3.196(37), 2.868(83), 2.599(100), 1.719(19)

Type material is deposited in the mineralogical collections of the National Astronomical Observatories, Chinese Academy of Sciences, 20A Datun Road, Chaoyang District, Beijing 100101, People's Republic of China. catalogue number CE5C0600YJFM002GP

## NOMENCLATURE/CLASSIFICATION PROPOSALS APPROVED IN AUGUST 2022

### *Nomenclature of polymorphs and polysomes*

New guidelines for the nomenclature of polymorphs and polysomes have been approved by the CNMNC:

– *Polymorphs with different crystal systems* are distinguished by the prefixes cubo- (cubic), hexa- (hexagonal), tetra- (tetragonal), trigo- (trigonal), ortho- (orthorhombic), clino- (monoclinic), and anortho- (triclinic).

– *Polymorphs with different crystal systems but showing a pseudosymmetry* should show the prefix “pseudo-”.

– *Polymorphs with the same crystal system but different space groups* are distinguished by the prefix “para-”. If three or more polymorphs show the same crystal system but different space groups, the space group notation may be added as a suffix, but such a nomenclature should be avoided if possible.

– *Polymorphs with the same space group* are distinguished by the prefix “para-”.

– *Minerals with polymorph suffixes but with different chemical compositions* cannot be considered as true polymorphs, so we recommend using the prefix “meta-”, which indicates a close but significantly different chemical composition.

– *Polysomatic symbols* have to be placed as a suffix, which indicates the number and types of modules which alternate in the structure as in the högbomite supergroup, or as prefixes as in the sartorite homologous series.

These recommendations have to be applied for future new mineral proposals, but the modifications of historical and well-established names have to pass through the CNMNC for approval. In order to be consistent with the new guidelines, 25 mineral names were modified: domeykite- $\beta$  becomes trigodomeykite, fergusonite-(Y)- $\beta$  becomes clinofergusonite-(Y), fergusonite-(Ce)- $\beta$  becomes clinofergusonite-(Ce), fergusonite-(Nd)- $\beta$  becomes clinofergusonite-(Nd), ice-VII becomes cubo-ice, roselite- $\beta$  becomes anorthoroselite, sulfur- $\beta$  becomes clinosulphur, mertieite-II becomes mertieite, mertieite-I becomes pseudomertieite, uranophane- $\alpha$  becomes uranophane, uranophane- $\beta$  becomes parauranophane, gersdorffite- $P2_13$  becomes gersdorffite, gersdorffite- $Pa3$  becomes paragersdorffite, gersdorffite- $Pca2_1$  becomes orthogersdorffite, betalomonosovite becomes paralomonosovite, lammerite- $\beta$  becomes paralammerite, nováčekite-I becomes hydronováčekite, nováčekite-II becomes nováčekite, halloysite-7 $\text{Å}$  becomes halloysite, halloysite-10 $\text{Å}$  becomes hydrohalloysite, metauranocircite-I becomes metauranocircite, taimyrite-I becomes taimyrite, uranocircite-II becomes uranocircite, andorite IV becomes quatranderite, and andorite VI becomes senanderite.

**NOMENCLATURE/CLASSIFICATION PROPOSALS APPROVED  
IN SEPTEMBER 2022*****Voting proposal 22-E: Redefinition of braggite and vysotskite***

The proposal 22-E is accepted. The ideal formula for braggite is redefined as PdPt<sub>3</sub>S<sub>4</sub>. The ideal formula for vysotskite is redefined as PdS. The ideal formula of cooperite (PtS) remains as currently given in the IMA List of Minerals.

***Uranotungstite: revised formula***

Recently, a paper has been published [*Am. Mineral.*, **107**, 1709–1716 (2022)], in which the chemical formula of uranotungstite

is revised based on its crystal structure determination. From these data, collected on the type material, it is shown that the species is not Fe<sup>2+</sup>-dominant, as in the original description [*Tschermaks Mineral. Petrogr. Mitt.*, **34**, 25–34 (1985)], but Ba-dominant. Consequently, in agreement with the new chemical and structural data obtained on this mineral and with the dominant constituent rule, the formula of uranotungstite is modified from (Fe<sup>2+</sup>,Ba,Pb)(UO<sub>2</sub>)<sub>2</sub>(WO<sub>4</sub>)(OH)<sub>4</sub>·12H<sub>2</sub>O to Ba(UO<sub>2</sub>)<sub>2</sub>W<sub>2</sub>O<sub>8</sub>(OH)<sub>2</sub>·H<sub>2</sub>O. This is an executive decision taken by the CNMNC officers.
